published by the Guild in 1921,

PREFACE

THE first edition of the British Science Guild's "Catalogue of British Scientific and Technical Books" was published by the Guild in 1921, and contained 6,627 titles. A new edition, with 8,772 titles, was issued in 1925, and the present edition includes 13,915 titles—that is, more than double the number in the original volume. The Catalogue is limited to books published by British firms, and in their lists up to September 1929; so that it may be taken to represent the position at that date of British scientific literature so far as textbooks and works of reference in the fields of science and technology are concerned.

In compiling this list a generous interpretation has been taken of what may appropriately be comprehended by the term science. Social science, for example, is represented by more than a hundred titles, educational science by more than two hundred, and philosophy by five hundred; while on the applied side are architecture and graphic arts with four hundred titles between them. Anthropology has nine hundred titles and medicine six hundred, or, if such separate practical branches as dentistry, surgery, and gynaecology are included, the number amounts to more than sixteen hundred.

The compilation of the card catalogue from which this volume has been printed was undertaken by Miss Daphne Shaw; and the Committee entrusted by the Guild with the production of the work is gratefully appreciative of her devoted services. With few exceptions the publishers themselves consented to check the sets of cards containing the titles of their own books, but this was done some months ago, before the lists were sent to the printers, so that any imperfect entries may be due to some publishers preferring not to correct their own lists

Preface

of titles or to later changes in the catalogues of publishers who did return their cards corrected. It is almost inevitable in a Catalogue of this kind that some errors will occur, but the Committee trusts they are few. In regard to the bibliographic particulars, the Committee decided to omit page numbers in Roman numerals throughout the Catalogue, as there was a lack of uniformity as to such pages in publishers' lists. For every volume, however, the Catalogue gives name of author or editor, title, size, number of pages, date of last edition, name of publisher, and price.

The Catalogue Committee is responsible for the scheme of classification adopted. The general plan is that followed in the previous editions, but a slight re-arrangement has been made to provide a better grouping of the subjects, and the subdivision of a number of the headings; for example, Agriculture, Anthropology, and Geography have been expanded to meet the increased number and variety of titles dealt with. A few minor changes have been made in the sub-headings where required by the nature of the entries. Directories and Year Books have been collected together as a main class and the heading Dictionaries and Encyclopædias has been sub-divided according to subject.

In the work of classifying the actual titles, the Committee has had the advantage of the co-operation of a number of authorities familiar with the literature of particular groups of subjects; and it very gladly acknowledges the invaluable assistance thus received. Amongst those who have rendered voluntary service in this way are:

MISS M. S. ASLIN.

When the publication of the first edition of the Catalogue was undertaken by the British Science Guild, the Publishers' Association suggested to its members that they might contribute to the cost by subscribing sums based upon the number of titles of their books included. In return for such contributions, the Guild undertook to present five hundred copies for distribution to foreign libraries. The number of publishers whose book-titles appear in the present edition is 627. Of these firms 69, or

Preface

about ten per cent., having total entries of 6,932 titles, have continued to act on the suggestion of the Publishers' Association, but for the remainder of the titles in the Catalogue, representing 558 publishing houses, no payment has been promised. Whatever advantage the Catalogue has in making known British scientific and technical books is thus not only shared by publishers who have agreed to contribute to the cost of production but also by those who have not done so. The actual sum received or promised represents approximately the amount which would be realised by the sales of the five hundred copies presented to foreign libraries. This is, of course, a substantial subscription, and the British Science Guild gladly expresses its indebtedness to the publishers who in this way have encouraged the publication of the present Catalogue. Recognition of the value of the Catalogue to students and to technologists is shewn by a grant of £20 from the Institution of Mechanical Engineers and of £20 from the Institution of Electrical Engineers. It is gratifying to the Guild to be able again gratefully to record these grants.

The name index of the Catalogue was compiled by Miss Shaw, but the subject index is the work of Mr. G. S. Sweeting, and its preparation has meant not merely the indexing of words in titles of books, but also intelligent consideration of the main subjects involved. The Committee believes that an index of this kind will be a very helpful guide to works dealing with particular subjects; and whatever assistance it thus affords must be placed to Mr. Sweeting's credit. Finally, thanks are gladly expressed to Mr. E. Taylor, who is responsible for the lists of scientific and technical books published monthly in *Nature*, and has read with critical eyes the whole of the proofs of the Catalogue.

BIBLIOGRAPHICAL DETAILS

Books that are out of print are not given; but where a new edition is in course of preparation, it is so mentioned.

Where no edition is mentioned, the title refers to the first, as the only, edition. A further edition generally means that the text of the book has been revised and brought up to the date given.

An "impression" is a reprint of the original, or last edition, without alteration.

Difficulty arises in some instances as to the date given. Certain publishers give the date of the reprint of a book and not that of the original publication; but all the dates given in this Catalogue are those of books obtainable when the Catalogue went to Press.

Where two dates are given, that in parenthesis is the date of the last edition, the following date being the year the same edition was reprinted.

Some important books appear to be old, but in various cases essentials do not alter.

The sizes of books are designated in the usual way, and a list is given below of the equivalent measurements in inches.

With very few exceptions, all books are bound in cloth covers.
